Sudan National Mine Action Standards (SNMAS)

Management of SNMAS Amendment

The Sudan National Mine Action Standards are living documents and subject to a regular review and possible updating and amendment on yearly basis, however, certain SNMAS will be reviewed and updated as per the amendment of certain IMAS and any new development or request for amendments, especially for reasons of safety and operational efficiency purposes.

As amendments are made to any SNMAS, the number of SNMAS, the number of amendments, the date, details and reason for amending related SNMAS will be included in below table. The amendment number and date will also be reflected on the cover page of related SNMAS by the inclusion under the edition date of the phrase "incorporating amendment numbers 1, 2..." and will replace the previous version of the SNMAS in NMAC website www.su-mac.org.

Below table shall be used for the amendment record and be updated immediately after the amendments are made and approved by NMAC General Director or an Officer in Charge on behalf of the General Director.

As the formal reviews of SNMAS are completed new editions may be produced and issued. Amendments up to the date of the new edition will be incorporated into the new edition and the amendment number phrase on the cover page will be cleared, however, the amendment record shall be maintained.

It is expected and trusted that the members of RB will not only represent their own organization but professionally and constructively conduct the review on behalf of the mine action programme of Sudan.
